

Agendas

1.Free Access to online learning platform like Coursera

Proposal: The pandemic situation has changed the general way of learning and shifted us to a mode of online learning. It has also led to a change in some parts of the education system. Keeping this in mind, an advantage of this learning mode can be taken by helping the students develop some other academic and extracurricular skills. We can find many online certified teaching platforms that can enhance our skills and get us the certification of that course after proper completion. It can surely help the students in their placement and intern too.

Possible Solution: Proposed to provide free access to the Certified online learning platform like Coursera, Udemy, Coding Ninjas, etc.

2.Online Portal to List the Opportunities for Girls

Proposal: Growing tech companies offer many exciting and beneficial opportunities for girls to help in their skills development and for future open-source contributions. However, we often miss the opportunities due to the lack of information. For example, sometimes, we lack official detail and emails about several scholarships and finance-related programs like Women's Possibilities Summit offered by Goldman Sachs, which is only for girls.

Possible Solution: An online portal accessible to girls consisting of a list of all these opportunities and events to keep them updated.

3.Coding Events and Webinars for Girls

Proposal: In the present situation, programming has become an essential need in an engineer's life. It is very familiar that many companies have different selection procedures for girls and boys. Thus, a particular preparation

theme for girls can be introduced by organizing Coding Events and Webinars focusing particularly on them.

Possible Solution: There should be coding tests and virtual technical rounds for girls to let them find out where they stand among each other. Many companies look for diversity while hiring, and the demand varies with diversity. Focusing on the female perspective, alumni webinars or alumni talks for such information and encouragement will surely benefit the girls.

4. Hygiene and Medication

Proposal: Focusing on hygiene and medication, girls often find it challenging to find sanitary napkins in the academic area, where we spend almost the entire time. Adding to this, we often face several health complications like stomach pain, body pain, weakness during a specific period. We all know that none of the places like the departmental area or the food court provides a first aid kit with regular medicines and sanitary napkins. As per the present scenario, there are serious requirements of the installation of jet spray in the hostel washrooms.

Possible Solution: Make the availability of essential medical kits consisting of the necessary medication and sanitary napkins in almost every part of the campus, including the food court and departmental area.

5. Increment in the number of hostel rooms for girls

Proposal: Looking at the past few years' statistics, we can observe that every year, the number of girls coming into the college increases and the single rooms are getting converted into double rooms for adjustment. As a result, the chance of a girl getting a single room has decreased, which is discomforting.

Possible Solution: Doing an appropriate distribution of the freshers among different hostels and increasing the number of hostel rooms for the girls to be allocated comfortable single rooms.

6. Juice center in Lecture Hall Complex

Proposal: Many among us are health-conscious and have had some medical issues and hence prefer fresh fruits and juices rather than oily and junk food during long lecture sessions. So there can be a fruit center.

Possible Solution: Installation of fruit and juice centers on the academic side will help.
